## PART I Remote Sensing and Image Analysis

|                                                                 |          |                                                                       |           |
|-----------------------------------------------------------------|----------|-----------------------------------------------------------------------|-----------|
| <b>1. Concept of Remote Sensing</b>                             | <b>3</b> | 1.14 Applications of Remote Sensing                                   | 31        |
| 1.1 Introduction                                                | 3        | 1.15 Advantages of Remote Sensing                                     | 31        |
| 1.2 Distance of Remote Sensing                                  | 3        | 1.16 Limitations of Remote Sensing                                    | 32        |
| 1.3 Definition of Remote Sensing                                | 4        | 1.17 Ideal Remote Sensing System                                      | 32        |
| 1.4 Remote Sensing: Art and/or Science                          | 5        | <b>2. Types of Remote Sensing and Sensor Characteristics</b>          | <b>35</b> |
| 1.5 Data                                                        | 5        | 2.1 Introduction                                                      | 35        |
| 1.5.1 In Situ Data                                              | 6        | 2.2 Types of Remote Sensing                                           | 35        |
| 1.5.2 Remotely Sensed Data                                      | 6        | 2.2.1 Classification Based on Platform                                | 36        |
| 1.6 Remote Sensing Process                                      | 6        | 2.2.2 Classification Based on Energy Source                           | 37        |
| 1.7 Source of Energy                                            | 8        | 2.2.3 Classification Based on Imaging Media                           | 38        |
| 1.7.1 Concept of Energy                                         | 8        | 2.2.4 Classification Based on the Regions of Electromagnetic Spectrum | 39        |
| 1.7.2 Electromagnetic Radiation                                 | 9        | 2.2.5 Classification Based on Number of Bands                         | 40        |
| 1.7.3 Electromagnetic Spectrum                                  | 13       | 2.3 Characteristics of Images                                         | 40        |
| 1.8 Interaction with Atmosphere                                 | 18       | 2.4 Orbital Characteristics of Satellite                              | 43        |
| 1.8.1 Absorption                                                | 18       | 2.4.1 Orbit of Remote Sensing Satellite                               | 46        |
| 1.8.2 Scattering                                                | 19       | 2.5 Remote Sensing Satellites                                         | 48        |
| 1.8.3 Refraction                                                | 20       | 2.6 Concept of Swath                                                  | 51        |
| 1.8.4 Reflection                                                | 21       | 2.7 Concept of Nadir                                                  | 52        |
| 1.9 Interaction with Target                                     | 21       | 2.8 Sensor Resolutions                                                | 52        |
| 1.9.1 Hemispherical Absorptance, Transmittance, and Reflectance | 22       | 2.8.1 Spatial Resolution                                              | 53        |
| 1.9.2 Spectral Reflectance Curve                                | 24       | 2.8.2 Spectral Resolution                                             | 55        |
| 1.10 Interaction with the Atmosphere Again                      | 26       | 2.8.3 Radiometric Resolution                                          | 56        |
| 1.11 Recording of Energy by Sensor                              | 26       | 2.8.4 Temporal Resolution                                             | 58        |
| 1.11.1 Target and Path Radiance                                 | 27       | 2.9 Image Referencing System                                          | 60        |
| 1.12 Transmission, Reception, and Processing                    | 28       |                                                                       |           |
| 1.13 Interpretation and Analysis                                | 29       |                                                                       |           |
| 1.13.1 Visual Image Interpretation                              | 29       |                                                                       |           |
| 1.13.2 Digital Image Processing                                 | 30       |                                                                       |           |

- 2.9.1 Path 60
- 2.9.2 Row 60
- 2.9.3 Orbital Calendar 64

### 3. History of Remote Sensing and Indian Space Program 66

- 3.1 Introduction 66
- 3.2 The Early Age 67
- 3.3 The Middle Age 69
- 3.4 The Modern Age or Space Age 70
- 3.5 Indian Space Program 74
  - 3.5.1 DOS and ISRO 75
  - 3.5.2 NRSC 78
  - 3.5.3 Indian Launch Programs 79

### 4. Photographic Imaging 94

- 4.1 Introduction 94
- 4.2 Camera Systems 94
  - 4.2.1 Components of Aerial Metric Camera 95
  - 4.2.2 Photographic Parameters 97
- 4.3 Types of Camera 98
  - 4.3.1 Metric Cameras 98
  - 4.3.2 Multiple-lens (or Multi- spectral or Multiple-band) Cameras 98
  - 4.3.3 Panoramic Cameras 99
  - 4.3.4 Strip Cameras 100
  - 4.3.5 Large Format Cameras 100
- 4.4 Filter 101
  - 4.4.1 Absorption Filter 103
  - 4.4.2 Interference Filter 103
  - 4.4.3 Anti-vignetting Filter 103
  - 4.4.4 UV Filter and Skylight Filter 103
  - 4.4.5 Haze Filter 103
  - 4.4.6 Polarizing Filter 104
- 4.5 Film 104
  - 4.5.1 Types of Film 104
  - 4.5.2 Film Size 106
  - 4.5.3 Film Resolution 106
  - 4.5.4 Processing of Black-and-White Film 106
  - 4.5.5 Processing of Colour Film 108
  - 4.5.6 Digitization of Film 109
- 4.6 Geometry of Aerial Photography 111
  - 4.6.1 Scale of Photograph 112
  - 4.6.2 Vantage Point 113

- 4.7 Ideal Time and Atmosphere for Aerial Remote Sensing 116

### 5. Digital Imaging 118

- 5.1 Introduction 118
- 5.2 Digital Image 118
- 5.3 Sensor 120
  - 5.3.1 Dispersing Element 122
  - 5.3.2 Filter 122
  - 5.3.3 Spectrometer and Spectroradiometer 122
  - 5.3.4 Detectors 123
- 5.4 Imaging by Scanning Technique 125
  - 5.4.1 Across-track Scanning 125
  - 5.4.2 Along-track Scanning 129
- 5.5 Hyper-spectral Imaging 141
  - 5.5.1 Airborne Visible Infrared Imaging Spectrometer (AVIRIS) 142
  - 5.5.2 Compact Airborne Spectrographic Imager-2 (CASI-2) 143
  - 5.5.3 Compact High Resolution Imaging Spectrometer (CHRIS) 143
- 5.6 Imaging By Non-scanning Technique 143
- 5.7 Thermal Remote Sensing 144
  - 5.7.1 Radiant versus Kinetic Temperature 144
  - 5.7.2 Blackbody Radiation 145
  - 5.7.3 Thermal Imaging 146
  - 5.7.4 Thermal Properties 149
  - 5.7.5 Thermal Image and Temperature Mapping 150
  - 5.7.6 Thermal Remote Sensing Sensors 150
- 5.8 Other Sensors 152
  - 5.8.1 Atmospheric Sensors 152
  - 5.8.2 Active Remote Sensors 153
  - 5.8.3 Video 156
  - 5.8.4 Passive Microwave Remote Sensing 156

### 6. Microwave Remote Sensing 161

- 6.1 Introduction 161
- 6.2 Passive Microwave Remote Sensing 161
  - 6.2.1 Passive Microwave Imagers 162

|                                                           |            |                                                       |            |
|-----------------------------------------------------------|------------|-------------------------------------------------------|------------|
| 6.3 Active Microwave Remote Sensing                       | 163        | <b>8. Photogrammetry</b>                              | <b>225</b> |
| 6.4 Radar Imaging                                         | 164        | 8.1 Introduction                                      | 225        |
| 6.4.1 Frequency/Wavelength                                | 166        | 8.2 Development of Photogrammetry                     | 226        |
| 6.4.2 Polarization                                        | 167        | 8.3 Classification of Photogrammetry                  | 228        |
| 6.4.3 Viewing Geometry                                    | 169        | 8.4 Photogrammetric Process                           | 229        |
| 6.4.4 Spatial Resolution of Radar System                  | 170        | 8.5 Acquisition of Imagery and its Support Data       | 230        |
| 6.4.5 Speckle                                             | 177        | 8.5.1 Acquisition of Imagery Using Aerial Platform    | 230        |
| 6.4.6 Surface Geometry                                    | 179        | 8.5.2 Acquisition of Imagery Using Satellite Platform | 234        |
| 6.4.7 Surface Roughness                                   | 180        | 8.5.3 Control Surveys                                 | 236        |
| 6.4.8 Dielectric Properties                               | 182        | 8.5.4 Geometric Distortion in Imagery                 | 237        |
| 6.5 Airborne Versus Space-Borne Radars                    | 183        | 8.6 Orientation and Triangulation                     | 240        |
| 6.6 Radar Systems                                         | 184        | 8.6.1 Coordinate Systems                              | 240        |
| <b>7. Ground-truth Data and Global Positioning System</b> | <b>188</b> | 8.6.2 Orientation                                     | 241        |
| 7.1 Introduction                                          | 188        | 8.6.3 Block Triangulation                             | 245        |
| 7.2 Requirements of Ground-Truth Data                     | 189        | 8.6.4 Transformation                                  | 246        |
| 7.3 Instruments for Ground Truthing                       | 190        | 8.7 Stereo Model Compilation                          | 246        |
| 7.4 Parameters of Ground Truthing                         | 193        | 8.8 Stereoscopic 3D Viewing                           | 247        |
| 7.4.1 Atmospheric Conditions                              | 193        | 8.8.1 Stereoscopic Viewing in Analog Photogrammetry   | 250        |
| 7.4.2 Surface Water                                       | 194        | 8.9 Stereoscopic Measurement                          | 252        |
| 7.4.3 Vegetation                                          | 194        | 8.9.1 $x$ -Parallax                                   | 252        |
| 7.4.4 Soil, Bare Ground, and Rock                         | 194        | 8.9.2 $y$ -parallax                                   | 255        |
| 7.4.5 Dark and Light Calibration Targets                  | 194        | 8.10 DTM/DEM Generation                               | 256        |
| 7.5 Factors of Spectral Measurement                       | 195        | 8.11 Contour Map Generation                           | 256        |
| 7.5.1 Sun Angles                                          | 195        | 8.12 Orthorectification                               | 257        |
| 7.5.2 Cloud Condition                                     | 195        | 8.13 3D Feature Extraction                            | 258        |
| 7.5.3 Aerosol, Haze, and Water Vapour                     | 196        | 8.14 3D Scene Modelling                               | 259        |
| 7.5.4 Topography                                          | 196        | 8.15 Photogrammetry and LiDAR                         | 259        |
| 7.5.5 Shadows                                             | 196        | 8.16 Radargrammetry and Radar Interferometry          | 261        |
| 7.6 Global Navigation Satellite System                    | 196        | 8.17 Limitations of Photogrammetry                    | 262        |
| 7.6.1 Satellite-based Navigation and Positioning Systems  | 198        | <b>9. Visual Image Interpretation</b>                 | <b>264</b> |
| 7.6.2 Functional Segments of GPS                          | 200        | 9.1 Introduction                                      | 264        |
| 7.6.3 Working Principle of GPS                            | 206        | 9.2 Information Extraction by Human and Computer      | 264        |
| 7.6.4 GPS Signals                                         | 212        | 9.3 Remote Sensing Data Products                      | 269        |

# List of Colour Plates

## Plate 1

- Remote sensing process (*Chapter 1, p. 7*)
- Sensitivity of a sensor to wavelength of electromagnetic spectrum (*Chapter 2, p. 56*)
- Additive and subtractive colour model (*Chapter 4, p. 101*)

## Plate 2

- Normal or true colour and CIR or false colour images of an area (*Chapter 4, p. 105*)
- Three-tier imaging concept of IRS P6 (*Chapter 5, p. 136*)

## Plate 3

- Colour composite of three different polarized images (*Chapter 6, p. 168*)
- Digital photogrammetry workstation using anaglyph glasses (*Chapter 8, p. 249*)
- Examples of 3D scene model (*Chapter 8, p. 259*)

## Plate 4

- Typical photographic product supplied by NRSC (*Chapter 9, p. 271*)
- NASA's EO-1 satellite-captured images (*Chapter 9, p. 265*)

## Plate 5

- IKONOS satellite image (*Chapter 9, p. 265*)
- Satellite images of deforestation in Bolivia (*Chapter 9, p. 266*)

## Plate 6

- Images of Ostrov Matua acquired by the ASTER on NASA's Terra satellite (*Chapter 9, p. 266*)
- Different patterns of agricultural field (*Chapter 9, p. 267*)

## Plate 7

- Different objects highlighted in different band combinations (*Chapter 9, p. 279*)
- Multispectral thermal images (*Chapter 9, p. 299*)
- Colour composites of radar images (*Chapter 9, p. 304*)

## Plate 8

- Display of digital image (*Chapter 10, p. 317*)
- Different colour composites (*Chapter 10, p. 331*)
- Fusion of multispectral and panchromatic images (*Chapter 10, p. 358*)

## Plate 9

- Spectral pattern recognition (*Chapter 10, p. 360*)
- Multisensor, Multiresolution, and multitemporal images (*Chapter 11, p. 380*)

**Plate 10**

- Multispectral image merged with radar image (*Chapter 11, p. 380*)
- IRS LISS-IV multispectral images (*Chapter 11, p. 381*)

**Plate 11**

- Satellite images of pre- and post-tsunami (*Chapter 11, p. 382*)
- Multistage, multiplatform, and multiresolution images (*Chapter 11, p. 383*)

**Plate 12**

- Land-use/land-over change with time (*Chapter 12, p. 400*)
- Identification of crop and damage to crop (*Chapter 12, p. 403*)
- Monitoring deforestation using satellite images (*Chapter 12, p. 408*)

**Plate 13**

- Forest fire and damage of burn detected using satellite imageries (*Chapter 12, p. 410*)

**Plate 14**

- Night-time optical satellite image (*Chapter 12, p. 418*)
- Baseline thematic map (*Chapter 12, p. 424*)

**Plate 15**

- Imaging of ocean chlorophyll (*Chapter 12, p. 430*)
- Sea-surface temperature mapping (*Chapter 12, p. 431*)

**Plate 16**

- Representation of earth features as point, line, area, and volume (*Chapter 15, p. 476*)
- Virtual environment over the Internet (*Chapter 20, p. 606*)
